

money for scholarships for kids who excelled in history. But it also required that not only did we put on a weekend festival but months of activity. Changing a small gym so it didn't look like a small gym, doing the costumes, writing the script, preparing and providing for a six-course meal that guaranteed there would always be leftovers.

As department chairman, I approved of all these projects, and I probably drove my fellow teachers into the ground trying to maintain all these activities. And the question you have to ask is, why did we do it? And it is a very simple answer.

Nothing ever stays static or constant. If you are not moving forward, you are moving backwards. And it is instinctive within the human being that they want to expand, do different things. Even since coming to Congress, I am doing the same thing: I have associated among the programs what I think was a very academic program of study and visiting in the Washington, D.C. area; so once again in the fall I will bring 20 to 30 kids from my district here where I will get to be the teacher again, taking them through Washington and the experience of Washington in conjunction with the closeup program.

Now, I mention that simply because what we do in our daily lives in trying to expand and grow and what I did as a teacher is the same thing government does. I do not blame bureaucrats for trying to expand their programs. That is the instinct and nature of mankind.

In the 1930s and again in the 1960s, the Federal Government expanded all sorts of programs to solve problems. Legitimate. It was good. The question that has to be asked is, what happens once those problems of 40 or 50 or 70 years ago are solved? Do we then eliminate the program or do the programs do the same thing I did as a history teacher, trying to find new things to do, more things to do as you are trying to expand the scope and responsibility of your task at hand?

And that is exactly what does happen. We never eliminate programs. We simply add to them, which is why today we have 342 economic development programs, 130 programs serving people with disabilities, 130 programs for at-risk youth, 90 programs for early childhood development, 75 programs for international education, 72 programs dedicated to assuring safe water, 50 programs for homeless assistance, 45 Federal agencies conducting Federal criminal investigations, 40 separate employment and training programs, 28 rural development programs, 27 teen pregnancy programs, 26 K-12 grant programs, 23 agencies providing aid to former Soviet republics, 19 programs fighting substance abuse, 17 rural water and wastewater programs, 17 trade agencies monitoring 400 international trade agreements, 12 food safety programs, 11 principal statistics agencies, and four overlapping land management agencies.

Why do we do that? Simply because that is the nature of the beast. How do we solve that? Well, we review those. A Federal review, according to one report from the Heritage Foundation, found that 38 percent of all the programs that are run by the Federal Government fail to meet their core needs, the reason for which they are in existence.

So how do we solve that? How do we review that? How do we do that in a safe and fair manner? Well, we had the experience going through the BRAC process of trying to come up with independent agencies, taking the politics out of the issue, and looking at some kind of clear, concise criteria and evaluating where we were and what we should do and need in the future.

Representative TIAHRT and Representative BRADY have introduced legislation to advance that same process with Federal programs. And so they will look at those programs in bills that will be before the House later this week with four specific recommendations or four specific parts which will make them effective:

Number one, they are bipartisan programs that will try to take political wrangling out of the equation. Number two, they will look at every program with a clear and concise criteria, including the constitutionality of that program in the first place. Number three, they will review all programs. And, number four, they will have a legislative process which will expedite the process of review and consideration.

Now, once again I do not blame the Federal Government or the bureaucracy of the Federal Government for its ability to expand. That I think is common. That is native practice. What we have to do as a Congress is realize if we do not like that expansion, it is our responsibility to make sure that that expansion is put in check. And these two bills are a perfect way of doing it.

IRAQ WAR POWERS REPEAL ACT OF 2006

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Ms. WOOLSEY) is recognized for 5 minutes.

Ms. WOOLSEY. Mr. Speaker, on October 10, 2002, despite the objections of 133 Members, myself included, this body, the House of Representatives, voted to give the President of the United States the authority to launch a preemptive strike against Iraq.

If we had the information on that day that we have now, I wonder how many votes the war resolution would have garnered. If we had known that Saddam Hussein had no weapons of mass destruction; if we had known that the President was hell bent on going to war no matter what, regardless of the intelligence, with or without the U.N.'s blessing; if we had known that we would have still been occupying Iraq nearly 4 years later; if we had known that our occupation would give rise to a violent insurgency, sectarian strife,

and all-out civil war; if we had known that the cost of this war would approach \$5 trillion; if we had known that more than 2,550 brave Americans would never come home and thousands upon thousands of Iraqi civilians would be killed for the sake of their so-called liberation; if we had known of the atrocities and constitutional desecrations that would be committed in the name of war, from Abu Ghraib to domestic spying to Guantanamo Bay.

Along with many of my colleagues, I raised these concerns at the time. We were vocal critics of the war before we even knew what a debacle it would become. But our objections were ignored and our voices drowned out by a steady drumbeat of misinformation coming from the administration and its allies. They raised the specter of a mushroom cloud in the chilling and disingenuous words of Condoleezza Rice. They insisted that the Iraqi people would greet us as liberators. They claimed that the war would be a cakewalk, with minimal cost of lives and taxpayer dollars. They assured us that the Iraq invasion would spread freedom and democracy throughout the Middle East, an assertion that has been proven tragically wrong by the recent hostilities between Israel and Lebanon. Anyone who disagreed with this view of the Iraq occupation had his or her loyalty of America called into question.

Today the American people know the truth, that those of us who seemed like lonely dissenters were right all along. The American people agree that it is time to find a way out of Iraq, to end this occupation, because they know you cannot win an occupation.

Our troops have been put in an impossible position without the proper training or equipment. They are being asked to carry out an open-ended occupation of a country wracked with centuries-old religious conflict and few democratic conditions on which to fall back. Moreover, this occupation has no legitimacy whatsoever, having never been authorized or ratified by the United States Congress.

So today I introduced the Iraq War Powers Repeal Act of 2006. It would reverse the fateful decision of nearly 4 years ago and allow Congress to reassert its constitutional authority on matters of war and peace. It would strip from the President the powers he has shamelessly abused. From there we can and we must end this occupation, while using diplomacy, humanitarian and peacekeeping tools to help Iraq achieve long-term security and stability. But we must return Iraq to the Iraqis and return our brave soldiers to their families here at home, who anxiously await their return.

□ 1915

GRAVE CONCERNS ABOUT IRAQ

The SPEAKER pro tempore (Mr. BOUSTANY). Under a previous order of the House, the gentleman from New

York (Mr. BISHOP) is recognized for 5 minutes.

Mr. BISHOP of New York. Mr. Speaker, I rise with grave concerns about the situation in Iraq.

As I indicated during a Special Order organized last week by the gentleman from Connecticut, Mr. LARSON, I believe the war in Iraq is the centerpiece of the administration's failed foreign policies. The war in Iraq has proven to be a diversion from what should be our primary foreign policy focus, winning the global war on terror. Our preoccupation with Iraq is decimating our Armed Forces, who now find themselves entrenched in a civil war where they do not belong.

The administration's failure to measure progress in Iraq is matched by its broader foreign policy failures. North Korea and Iran present greater risks to our safety and security than they did when the President identified them as the "axis of evil" in his 2002 State of the Union address.

Today, the situation in Iraq is a tragedy, for America, for our brave troops in uniform, for the future of our Nation, and for the prospect of Middle East peace which fades every day we stay in Iraq and as the violence between Israel and Hezbollah continues.

Although 2006 was supposed to be a "year of significant transition" pursuant to last year's defense authorization law, we are no closer to finishing the year with any measure of positive transition than we were when the year started.

I call my colleagues' attention to a new book by Thomas Ricks, the Washington Post reporter who appeared on Meet the Press on Sunday, to discuss "Fiasco: The American Military Adventure in Iraq." As Mr. Ricks explained, the administration's foresight and planning was as poor as its conduct of the post-war period. It is why, 3½ years later, we are still paying the price for such negligence, and why 2006 is not on track to be the year of significant transition that not only had we hoped for, but that we simply must have.

Halfway through the year, these statistics show that we are moving backwards, away from our goal of handing Iraq over to a safe, secure and stable democracy. There were 3,149 civilians deaths in the month of June. That is up from 1,978 civilian deaths in January. For the year, more than 14,000 Iraqi civilians have died. That is an average of 2,400 a month. Another way of looking at that is every 5 weeks, Iraqi civilians die in the number that we lost on September 11.

The overwhelming majority of deaths have occurred in and around Baghdad. If the Iraqi police and army can't provide security, is it any wonder that the Iraqi people have turned to the militias? That is not a measure of progress in any year, but particularly in a year of transition, that would be a turn for the worse.

Every day focusing on combating sectarian violence is another day and an-

other dollar we divert from what should be our priorities, increasing oil production, rebuilding infrastructure, promoting more dialogue between Sunnis and Shia and developing a long-term political solution for a stable, lasting democracy.

The Iraqi leadership isn't showing much progress either, particularly following remarks by Prime Minister al-Malaki and Speaker al-Mashhadani, who both openly condemned Israel in recent weeks.

Combined with the fact that nearly 50 percent of Iraqis support attacking our troops, Iraq is no closer to what the neo-conservatives envisioned as a partner for Israel who would catalyze change and bring about stability in the Middle East.

When the prime minister addresses a joint session of Congress tomorrow morning, I would hope he says the following: First and foremost, that Iraq is indebted to America for the sacrifice of 2,500 of its sons and daughters. Second, that he regrets and retracts his comments about Israel. Third, that he is committed to routing terrorists, sectarian violence and corruption and disarming the sectarian militias. Fourth, that his government will honor the rights of ethnic and minority constituencies by revisiting divisive sections of Iraq's constitution.

Still, Mr. Speaker, it will take much more to accomplish the long-term political goals necessary to restore stability, liberty and democracy, not only in Iraq, but to a region suffering under the strain of so much violence and uncertainty. But we have a long way to go. Reaching our objectives will be further down that path as a result of the administration's failure in the pre-invasion planning and the conduct of the post-war period.

The tragedy of Iraq is perhaps the most solemn and vivid reminder of why a change in leadership is long overdue, and why America deserves a new direction in its foreign policy.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arizona (Mr. FRANKS) is recognized for 5 minutes.

(Mr. FRANKS of Arizona addressed the House. His remarks will appear hereafter in the Extensions of Remarks.)

VETO ON STEM CELL RESEARCH PUTS A ROADBLOCK IN THE WAY OF SCIENTIFIC PROGRESS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. MEEHAN) is recognized for 5 minutes.

Mr. MEEHAN. Mr. Speaker, the European Union agreed today to continue its funding for embryonic stem cell research, research specifically involving the use of embryos that would otherwise be discarded from fertility clinics. Today's agreement among the Euro-

pean nations paves the way for a 55 billion Euro science program designed to improve and move this important research forward. Unfortunately, Europe's progress is in stark contrast to the embarrassing path chartered by the White House.

Mr. Speaker, America has long had a history of leading the world in scientific discovery are. President John Fitzgerald Kennedy made it a national priority to be the first Nation in the world to send a man to the moon. His leadership showed the rest of the world that the United States was the undisputed international leader in scientific progress.

By using his very first presidential veto to continue a misguided ban on stem cell research, President Bush has diminished American scientific standing in the world.

Mr. Speaker, 5 years ago, President Bush said that stem cell research had profound ethical questions. Today, I say that there are no more profound ethical questions than the fate of 100 million American lives, lives that can be saved, lives that will be lost if we don't move this vital research forward.

Last week, we sent to the White House a bipartisan bill that ethically advances stem cell research, a practice supported by 70 percent of Americans. Instead of embracing stem cell research, President Bush chose this moment in time to strike a blow against science and against hope and against saving lives.

The promise of stem cell research is great. One researcher at Harvard Medical School wrote in the New England Journal of Medicine, "The science of human embryonic stem cells is in its infancy," but he cautioned restricting stem cell research would "threaten to starve this field at a critical stage."

Last October, the prestigious, peer-reviewed Journal of Immunology featured a study by four researchers from the University of Minnesota who developed human embryonic stem cells that could destroy cancerous cells.

Mr. Speaker, when we tout the potential for stem cell research to develop future treatment for diseases like cancer, like Parkinson's, opponents of the research will say we are just dreamers, that the proof just isn't there. Well, Mr. Speaker, four cancer survivors live on my street in Lowell, Massachusetts. Shame on anyone who would take a dream away from them.

Nearly 35,000 cases of leukemia were diagnosed last year. In fact, about 30 percent of cancers in children from birth to 14 years of age are leukemia. Today, scientists are using embryonic stem cells to treat leukemia and lymphoma.

We are dreamers, Mr. Speaker, but those dreams are supported by hard science and research. Stem cells have the potential to develop into any kind of body tissue, including blood, brain, or nerve tissue. Scientists believe that this unique ability can lead to even more breakthroughs in the number of illnesses that now are untreatable.
